Reference for *Daniel-Adrian Petrescu*

I am pleased to support the application of Mr. Daniel-Adrian Petrescu for the **Infineon Summer School** programme.

By way of introduction, I am a Professor in the Department of Electronic Devices, Circuits and Architectures (DCAE), within the Faculty of Electronics, Telecommunications and Information Technology (ETTI), at the National University of Science and Technology POLITEHNICA Bucharest. I am also the Director of the Doctoral School of Electronics, Telecommunications and Information Technology and a PhD supervisor. My teaching activity includes courses such as Electronic Devices and Fundamental Electronic Circuits, and my research interests cover electronic devices and circuits, analogue and mixed-signal VLSI integrated circuit design, wide-bandgap semiconductor electronics, sensors and sensor interfaces, as well as the measurement and characterization of high-voltage and power devices.

I first became acquainted with Daniel through the Fundamental Electronic Circuits course, where I had the opportunity to observe his work throughout the semester, both during lectures and in seminar and laboratory activities. Through my interactions with him, I noted his seriousness, his consistent interest in electronics, and the thoughtful way in which he approaches technical concepts.

Throughout the course, Daniel had a very good progress. He demonstrated commitment, attention to detail, and a solid ability to understand fundamental concepts in electronic circuits. He also stood out through his willingness to deepen his knowledge of the topics studied, as well as through a mature and responsible attitude toward his academic work.

During practical activities, Daniel showed good analytical and technical problem-solving skills, approaching tasks in a logical and well-organized manner. He has shown

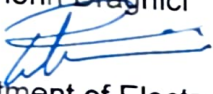

interest in both analogue and digital circuits, as well as in the way these are applied in modern electronic systems. In addition, he has developed practical skills in simulating the operation of electronic circuits using tools such as TINA and PSpice, as well as in circuit design and PCB layout development.

Beyond his technical abilities, Daniel is a persevering, responsible student who is receptive to feedback. He treats the activities in which he is involved with seriousness and commitment. I believe he has the potential to develop further in a competitive technical environment. I am confident that participation in the Infineon Summer School would provide him with a valuable opportunity to strengthen both his knowledge and his practical skills.

I therefore recommend Daniel-Adrian Petrescu's participation in this programme with full confidence. I consider him a suitable candidate for this opportunity, not only due to his technical preparation, but also because of the motivation, maturity, and seriousness he has consistently demonstrated.

Yours sincerely,

Prof. Florin Draghici
